DETAILED ACTION

Current Status

1. This action is responsive to Applicants' amendment of 12 September 2005.
2. Receipt and entry of Applicants' amendment is acknowledged.
3. Claims 1-13 are pending in the application.

Allowed Claims

Claims 1-13 are allowable over the prior art of record.

Reason For Allowance

The following is an examiner's statement of reasons for allowance: Applicants' claim a method of dimerizing isocyanates comprising reacting isocyanate functional compounds in the presence of phosphines containing at least one cycloaliphatic radical attached directly to phosphorus as catalysts resulting in the formation of uretdiones; wherein all the variables are as defined in the claims. The process was neither found to be obvious nor anticipated by the prior art of record.

The closest prior arts are Sandridge, (EP 1,244,416). However, applicants argue that in the Sandridge reference teaches trimerization process while applicants claim a dimerization process. The Examiner agrees with the applicant's argument because the process of making a trimer and a dimer are two different processes. The two processes require different process conditions. Specifically, the prior art fails to teach the use of a phosphine catalyst containing at least one cycloaliphatic radical attached directly to the phosphorus as presently claimed, in the dimerization reaction. These differences are not readily apparent and would not have been suggested to one of ordinary skill.

All claims (1-13) are allowed.
